About the Center for Progressive Reform

Founded in 2002, the Center for Progressive Reform is a 501(c)(3) nonprofit research and educational organization comprising a network of scholars across the nation dedicated to protecting health, safety, and the environment through analysis and commentary. CPR believes sensible safeguards in these areas serve important shared values, including doing the best we can to prevent harm to people and the environment, distributing environmental harms and benefits fairly, and protecting the earth for future generations. CPR rejects the view that the economic efficiency of private markets should be the only value used to guide government action. Rather, CPR supports thoughtful government action and reform to advance the well-being of human life and the environment. Additionally, CPR believes people play a crucial role in ensuring both private and public sector decisions that result in improved protection of consumers, public health and safety, and the environment. Accordingly, CPR supports ready public access to the courts, enhanced public participation, and improved public access to information. CPR is grateful to the Public Welfare Foundation for funding this white paper.

This white paper is a collaborative effort of the following individuals: **Sidney Shapiro** holds the University Distinguished Chair in Law at the Wake Forest University School of Law and is a member of the Board of Directors of the Center for Progressive Reform. **James Goodwin** is a Policy Analyst with the Center for Progressive Reform.

Executive Summary

It's likely that few outside of Washington have heard of the Small Business Administration's (SBA) Office of Advocacy, but this tiny and largely unaccountable office has quietly become a highly influential player in the federal regulatory system, wielding extraordinary authority over the workplace safety standards employers must follow, the quantity of air pollution factories can emit, and the steps that food manufacturers must take to prevent contamination of the products that end up on the nation's dinner tables.

The Office exercises this authority by superintending agency compliance with an expanding universe of analytical and procedural requirements—imposed by a steady stream of statutes and executive orders issued during the past three decades—that purportedly seek to ensure that agencies account for small business interests in their regulatory decision-making. Controversial rules can quickly become mired in this procedural muck, and an agency's failure to carry out every last required analysis with sufficient detail and documentation can spell doom for even the most important safeguards. This system provides the Office of Advocacy with a powerful lever for slowing down rules or dictating their substance.

The Office of Advocacy's role in the regulatory system bears a striking resemblance to that played by the White House Office of Information and Regulatory Affairs (OIRA). Both operate to similar effect, functioning as an anti-regulatory force from within the regulatory structure, blocking, delaying, and diluting agency efforts to protect public health and safety. Moreover, both offices have entry into the regulatory process on the strength of seemingly neutral principles and policy goals—promotion of economic efficiency and protection of small business, respectively. But in actual practice, both offices serve to politicize the process, funneling special interest pressure into agency rulemakings, even though such interests have already had ample opportunity to comment on proposed regulations. Despite these similarities, however, OIRA receives the bulk of attention from policymakers, the media, and the public.

This report shines light on the Office of Advocacy's anti-regulatory work, examining how its participation in the rulemaking process further degrades an already weakened regulatory system. As a preliminary matter, the nominal objective of the Office of Advocacy—subsidizing small businesses through preferential regulatory treatment¹—is based on a needless and destructive tradeoff; the government has several policy options for promoting small businesses without sacrificing public health and safety. The Office of Advocacy nevertheless devotes much of its time and resources to blocking, delaying, or diluting regulatory safeguards or to supporting general anti-regulatory attacks from industry and its allies in Congress. In short, blocking regulations has become the Office of Advocacy's *de facto* top priority, and its commitment to this goal has led the Office to engage in matters that have little or nothing to do with advancing small business interests or with ensuring that federal policy reflects the unique needs of these firms.

Blocking regulations has become the Office of Advocacy's *de facto* top priority, and its commitment to this goal has led the Office to engage in matters that have little or nothing to do with advancing small business interests or with ensuring that federal policy reflects the unique needs of these firms.

More specifically, the report finds that the Office of Advocacy:

- Pursues an inherently flawed mission that needlessly sacrifices public health and safety;
- Adds several unnecessary roadblocks to the rulemaking process, preventing agencies from achieving their respective missions of helping people and the environment in an effective and timely manner;
- Sponsors anti-regulatory research designed to bolster politicized attacks against the U.S. regulatory system;
- Testifies at congressional hearings aimed at advancing politicized attacks against regulations that are inconvenient to well-connected corporate interests;
- Takes advantage of overly broad small business size standards to weaken regulations for large firms;
- Enables trade association lobbyists to subvert its small business outreach efforts;
- Interferes with agency scientific determinations despite lacking both the legal authority and relevant expertise to do so; and
- Pushes for rule changes that would benefit large firms instead of narrowly tailoring its recommendations so that they help only truly small businesses.

The report concludes by identifying several reforms that would enable the Office of Advocacy to work constructively with regulatory agencies during the rulemaking process to advance small business interests without undermining those agencies' mission of protecting public health and safety. These recommendations are summarized in Table 1.

Table 1: Recommendations for Reforming the Office of Advocacy

<p>A New Mission: Promote “Win-Win” Regulatory Solutions that Ensure Both Small Business Competitiveness and Strong Protections for People and the Environment</p>	<ul style="list-style-type: none"> • Congress should amend the Office of Advocacy’s authorizing statutes to focus on promoting small business “competitiveness” instead of on reducing regulatory impacts or burdens. • Congress should provide the SBA with additional legal authorities to establish new subsidy programs that affirmatively assist small businesses meet effective regulatory standards without undermining their competitiveness. • Congress should establish and fully fund a network of small business regulatory compliance assistance offices. • Congress should significantly increase agency budgets so that they can effectively account for small business concerns in rulemakings without hindering their ability to move forward with needed safeguards. • The Office of Advocacy should identify and implement regulatory solutions that will enable small businesses to meet strong public health and safety standards while remaining competitive with larger firms. At a minimum, these solutions should include regulatory compliance assistance, finding opportunities to partner small businesses in mutually beneficial ways, and securing subsidized loans to cover compliance costs. • The Office of Advocacy should develop new guidance that helps agencies better address small business concerns in rulemakings by working toward win-win regulatory solutions. • The President should revoke Executive Order 13272, which empowers the Office of Advocacy to work with OIRA to interfere in agency rules.
<p>Restored Focus: Helping Truly Small Businesses Only</p>	<ul style="list-style-type: none"> • Congress should revise the Office of Advocacy’s small business size standards so that they (1) focus on truly small businesses (<i>i.e.</i>, those with 20 or fewer employees) and (2) prevent the Office from working on behalf of all firms, regardless of size, that work in industrial sectors that pose a high risk to public health and safety. • Congress should prohibit the Office of Advocacy from working with non-small businesses and should establish legal mechanisms for ensuring that this prohibition is observed. • Congress should conduct more frequent and thorough oversight of the Office of Advocacy.

In recent years, corporate interests and their anti-regulatory allies in Congress have championed several bills that would enhance the Office of Advocacy's power to prevent agencies from carrying out their statutory missions of protecting public health and safety. Two bills—the Regulatory Flexibility Improvements Act and the Freedom from Restrictive Excessive Executive Demands and Onerous Mandates Act—would require agencies to complete several new analytical and procedural requirements purportedly aimed at reducing regulatory burdens on small businesses. The bills would empower the Office of Advocacy to monitor agency compliance with these requirements, bolstering its ability to interfere in individual rulemakings. A third bill, the Clearing Unnecessary Regulatory Burdens Act, would authorize the Office of Advocacy to second-guess agency civil enforcement actions against small businesses for certain first-time violations of regulatory reporting requirements.

These bills are part of the broader wave of anti-regulatory attacks that has dominated the political landscape ever since the Republican Party's success in the 2010 congressional elections. When launching these attacks, anti-regulatory advocates frequently invoke small-business concerns. Small business has become a highly romanticized, almost mythological concept among the public and policymakers alike, evoking images of small “mom and pop” stores lining the idyllic Main Street of some quaint village. Because no politician wants to run the risk of being painted as “anti-small business,” anti-regulatory advocates have worked tirelessly to promote their cause as essential to helping small businesses. Moreover, recent high profile catastrophes involving inadequately regulated large businesses—including the BP oil spill and the Wall Street financial collapse—have provided anti-regulatory advocates with additional impetus to adopt the frame of small business to advance their agenda. In this atmosphere, proposals to expand the powers of the reliably anti-regulatory Office of Advocacy have become especially attractive to policymakers intent on weakening the nation's already fragile regulatory system.

Background: The Pervasive Problem of Under-Regulation

The United States faces a problem of under-regulation. The regulatory system is supposed to protect public health and safety against unacceptable risks, but the destructive convergence of inadequate resources, political interference, and outmoded legal authority often prevents regulatory agencies from fulfilling this task in a timely and effective manner. Unsupervised industry “self-regulation” has filled the resulting vacuum, yielding predictably catastrophic results.

Evidence of inadequate regulation and enforcement abounds—from the BP oil spill in the Gulf of Mexico to the Upper Big Branch Mine disaster that claimed the lives of 29 men; from the decaying natural gas pipeline networks running beneath our homes to the growing risk of imported food tainted with salmonella, botulism, or other contaminants showing up on grocery store shelves. And, of course, inadequate regulation of the financial services industry triggered the current economic recession and left millions unemployed, financially ruined, or both.

The proliferation of analytical and procedural requirements in the rulemaking process is a significant cause of this dysfunction.² Regulatory agencies must negotiate these analytical hurdles, even as their statutory responsibilities expand and their budgets remain constant or shrink. As agencies grow more “hollowed-out”—stretched thin by the demands of doing more with less—their pursuit of new safeguards becomes subject to increasing delays, while many critical tasks are never addressed at all.³ Careful analysis is important, but the regulatory process has already become so ossified by needless procedures and analyses that rulemakings commonly require between four and eight years to complete.⁴ Many of these analyses and procedures also provide powerful avenues for political interference in individual rulemakings, as the Office of Information and Regulatory Affairs’ (OIRA) centralized regulatory review process clearly illustrates.⁵ A recent CPR study found that OIRA frequently uses this review process to delay or weaken rules following closed-door meetings with corporate lobbyists.⁶

The Office of Advocacy has morphed into an institutionalized opponent of regulation, slowing the regulatory process and diluting the protection of people and the environment against unreasonable risks.

The Office of Advocacy Pushes the Regulatory Process Toward Less Effective Regulation

Since its creation, the Office of Advocacy's role in the rulemaking process has continually expanded, providing it with numerous opportunities to intervene in and potentially undermine individual rulemakings. Congress created the Office to represent small business in the regulatory system and to advocate for reduced regulation of small business. From this limited mandate to advocate on behalf of small businesses, the Office has morphed into an institutionalized opponent of regulation, slowing the regulatory process and diluting the protection of people and the environment against unreasonable risks. Yet, there is insufficient public recognition of how the Office participates in the rulemaking process and why its participation ends up making it more difficult for agencies to reduce safety, health and environmental risks. In addition, the Office engages in activities that bolster political attacks on regulation, such as publishing estimates of regulatory costs that are wildly inaccurate, and that fly in the face of estimates from other agencies of government with considerably greater expertise in the area. Such activities are frequently undertaken in conjunction with interest groups and trade associations that represent large business, not small ones. At times it is difficult to find any difference between the positions taken by the Office and those taken by such prominent regulatory opponents as the U.S. Chamber of Commerce.

Significantly, when the Office interferes in agency efforts to do the people's business—that is, implement and enforce duly enacted legislation—it does so free of virtually any public accountability mechanisms. The Office is housed within, but institutionally insulated from the Small Businesses Administration (SBA), a federal agency that supports America's small business sector through subsidized loans, preferential government contracting, and other assistance programs. As such, no chain of command connects the Office to either the head of the SBA or the President.⁷ At the same time, Congress has shirked its responsibility to provide meaningful oversight of the Office's activities. While Office of Advocacy officials have testified at dozens of hearings in the last 16 years, only four of those hearings could be described as oversight hearings for the Office.⁸ (In reality, two of those four hearings focused on supposed weaknesses in the Office's legal authorities and proposals for strengthening those authorities, rather than critically evaluating its performance.) By comparison, Congress has held dozens of oversight hearings for the EPA in the last year alone. Because of the lack of active oversight, Congress has no way to keep track of the Office's participation in the regulatory process or to ensure that it is not abusing its authority to intervene in rules to benefit politically powerful corporate interests at the expensive of public health and safety.

A Flawed Mission: Needlessly Sacrificing Public Health and Safety

Preferential regulatory treatment for small business can include regulatory exemptions; less stringent or delayed regulatory requirements; and relaxed enforcement for regulatory violations, such as waived or reduced penalties. As with other subsidies that small businesses receive—such as subsidized loans, tax breaks, and preferential government procurement and contracting policies⁹—preferential regulatory treatment makes it easier for people to start and sustain small businesses. But it also enables these businesses to avoid taking responsibility for pollution, workplace risks, or any other socially harmful byproducts of their activities. In other words, preferential regulatory treatment involves an explicit policy choice to shift the costs of these social harms from small businesses to the general public.

Governments typically subsidize an activity because they want more of the benefits that the activity produces. Accordingly, policymakers typically justify small business subsidies on the grounds that these businesses generate greater job growth and innovation as compared to non-small businesses. As numerous studies have demonstrated, however, small businesses actually create very few jobs on net, and the evidence is at best mixed as to whether these firms create more innovation (however that concept is defined and measured).¹⁰

Whatever jobs or other economic benefits small businesses do create come at a certain societal price. As Professor Richard Pierce of The George Washington University Law School has pointed out, preferential regulatory treatment for small businesses can be “socially destructive,” because such firms produce greater amounts of many social harms as compared to their larger counterparts—including dangerous workplaces, instances of racial discrimination, and air and water pollution.¹¹ For example, one study found that the risk of a fatal work-related accident is 500 times greater for employees of small businesses than for employees of large businesses. In addition, small businesses are less likely than their larger counterparts to reduce their social harms in the absence of enforcement-backed regulation.¹² Since the cost of reducing social harms is often disproportionately greater for small businesses, they have a stronger economic incentive to avoid pursuing reductions as much as possible. Further, both reputational concerns and fear of lawsuits are less likely to motivate small businesses to reduce their social harms. Because many small businesses work in relatively anonymity, they tend not to suffer significant reputational costs when they are caught polluting or operating a dangerous workplace. Typically lacking “deep pockets,” small businesses also tend not to be attractive defendants, even when their socially harmful activities have clearly injured others.

There is a fundamental flaw in the Office of Advocacy's core mission: Its work to weaken regulatory requirements for small businesses comes at too high a cost in terms of increased risks to public health, safety, and the environment.

Preferential regulatory treatment doesn't just let small businesses off the hook for the social harms they create; it can also enable larger businesses to avoid taking responsibility for their social harms as well.¹³ When small firms are exempted from regulation, larger businesses have a strong incentive to try to game the system by outsourcing their more socially harmful activities to them.

These concerns expose the fundamental flaw in the Office's core mission: Its work to weaken regulatory requirements for small businesses comes at too high a cost in terms of increased risks to public health, safety, and the environment. Preferential regulatory treatment is the worst kind of subsidy to provide for small businesses, since, as compared to larger firms, they often produce disproportionately greater amounts of the kind of social harms that regulations are meant to alleviate. To the extent that the Office succeeds at securing preferential regulatory treatment for small businesses, it is affirmatively promoting the uniquely disproportionate amount of social harms they create.

The Office of Advocacy Creates Roadblocks to Effective Regulation

Passed by Congress in 1976, Pub. L. 94-305¹⁴ created the Office of Advocacy and charged it with representing small businesses before federal agencies. With the passage of the Regulatory Flexibility Act¹⁵ (Reg-Flex) in 1980, Congress made preferential regulatory treatment of small businesses an explicit goal of the rulemaking process and empowered the Office to push agencies to pursue this goal. The enactment of the Small Business Regulatory Enforcement Fairness Act (SBREFA) in 1996 and the issuance of Executive Order 13272 by George W. Bush in 2002 has further strengthened the Office's role as an opponent of effective regulation.

Using its authority under Pub. L. 94-305, Reg-Flex, and Executive Order 13272, the Office has employed compliance guidance, regulatory comments, and congressional communications to push agencies to delay, weaken, or abandon crucial rulemakings.

The Regulatory Flexibility Act's Analytical Requirements

Reg-Flex requires agencies to perform several resource-intensive and time-consuming analyses of their rules to assess their potential impacts on small businesses. These analyses, layered as they are on top of the existing morass of regulatory-impact analyses, create an additional battery of procedural obstacles, further contributing to the ossification problem that already prevents agencies from developing effective new safeguards in a timely fashion.

Reg-Flex's analytical requirements apply only if, prior to proposing the rule, the agency finds that it would have a "significant economic impact" on a large number of small businesses, a concept that the Act fails to define. Otherwise, the agency can "certify" that the rule will not have such an impact, exempting it from the statute's remaining requirements. For rules found to have a significant impact, the agency must prepare two different "regulatory flexibility" analyses, an "initial" analysis for the proposed version of the rule and a "final" one for the final version.

The two regulatory flexibility analyses provide an inherently distorted picture of the regulations being assessed—one that is heavily biased against protective safeguards. Agencies must focus exclusively on the rule's potential costs on small businesses; the rule's benefits—the reason the agency is developing the rule at all—are ignored. In addition, the agency must evaluate possible alternatives that would "minimize" the rule's costs for small businesses. Among the alternatives that agencies must consider are rules that exempt small businesses, impose weaker standards, or phase in regulatory requirements over a longer timeline. Again, benefits are ignored: Such analysis automatically disregards any alternatives that would provide greater protections at equal or only slighter greater cost to small businesses.

Within 10 years of their completion, significant impact rules must go through still a third analysis—the Reg-Flex periodic look-back requirement. Reg-Flex requires that agencies review these rules to determine whether they should be eliminated or amended to "minimize" costs on small business. Again, this one-sided, anti-regulatory analytical framework ignores regulatory benefits and does not allow agencies to consider expanding rules that have proved to be successful.

Reg-Flex's Look-Back Requirement: The Real Record

A recent CPR study reviewed the Reg-Flex look-backs for nearly 40 Environmental Protection Agency and Occupational Safety and Health Administration regulations and found that nearly every one had concluded that the regulations were still necessary and did not adversely impact small businesses.

Source: Sidney Shapiro et al., Saving Lives, Preserving the Environment, Growing the Economy: The Truth About Regulation 10 (Ctr. for Progressive Reform, White Paper 1109, 2011), available at http://www.progressivereform.org/articles/RegBenefits_1109.pdf.

In 1996, Congress amended Reg-Flex to make agency compliance with several of its provisions—including certification that a rule will not have a significant impact on small businesses—judicially reviewable. This amendment makes all agency analyses part of the record for judicial review, and it authorizes reviewing courts to reject a rule on the sole basis that the agency had failed to adequately comply with one of the Act’s procedural requirements.

Guidance on Complying with the Regulatory Flexibility Act

Responding to Executive Order 13272’s requirement that the Office of Advocacy “train” agencies on how to comply with Reg-Flex, the Office has issued a guidance document in which it spells out in great detail its excessively strict interpretation of Reg-Flex’s requirements. (The Office most recently updated and expanded the document in May of 2012.) For example, in the guidance, the Office seeks to strongly discourage agencies from certifying their rules (*i.e.*, formally concluding that the rules will not have a significant impact on small businesses, thereby exempting them from Reg-Flex’s procedural requirements) by demanding that they build a virtually bulletproof record to support the certification, including providing specific data on how many businesses the rule would affect and what economic effect the rule would have on those businesses.¹⁶ In so doing, the Office sought to expand the range of rules subject to its influence (*i.e.*, by increasing the number of rules subject to Reg-Flex procedural requirements that the Office oversees). Moreover, generating such data about a rule’s potential impacts so early in a rulemaking is nearly impossible even under the best circumstances. Nevertheless, whenever agencies are unable to satisfy the Office’s strict certification record requirement, the guide advises agencies to conduct an initial regulatory flexibility analysis or even conduct a full-blown advanced notice of proposed rulemaking, procedures that add months to the process and waste scarce agency resources.

Remarkably, in the guidance, the Office also directs agencies to consider in their initial regulatory flexibility analysis regulatory alternatives that are not even within an agency’s legal authority to adopt. So, for example, the Office would encourage an agency to develop a rule that requires small businesses to test a piece of safety equipment only once a year, even though the underlying statute mandates that such equipment be tested at least twice a year. The guidance imposes this requirement even though Reg-Flex does not authorize it. Instead, the Act stipulates that any alternatives that agencies consider to minimize costs for small businesses must still meet applicable “statutory objectives.”¹⁷ In clear contradiction of Reg-Flex’s plain language, the Office asserts in the guidance “that the IRFA [initial regulatory flexibility analysis] is designed to explore less burdensome alternatives and not simply those alternatives it is legally permitted to implement.”¹⁸

Regulatory Comments

Pursuant to its authority under Pub. L. 94-305 to represent small businesses before federal agencies, the Office of Advocacy frequently comments on agencies' proposed rules in order to criticize agencies for not following its excessively strict interpretation of Reg-Flex's procedural requirements.¹⁹ In its recent comments, the Office typically invokes the strict interpretation of these provisions that it has outlined in its Reg-Flex compliance guidance document.

Invariably, the faults that the Office of Advocacy asserts are aimed either at increasing the procedural burdens of Reg-Flex's requirements—and thus adding more delay to a rulemaking—or at weakening agency rules outright. The Office might claim that an agency has improperly certified that its rule will not have a large impact on small business (and thus is not subject to Reg-Flex's requirements). Or it might claim that the agency has not properly carried out required Reg-Flex analyses, perhaps alleging that an agency hasn't included enough detail or factual evidence, or that the agency has underestimated a rule's costs or has failed to consider adequate weaker alternatives. For example, in its recent comments on the U.S. Fish and Wildlife Services' (FWS) proposed rule that revises the agency's critical habitat designation for the Northern Spotted Owl, the Office argued that the FWS's evidentiary record in support of certification lacked the necessary specific data and detail called for in its compliance guidance document.²⁰ With such comments, the Office seeks to use procedural hurdles of its own creation as a way to hamstring federal regulators working to fulfill their statutory obligations to regulate within their areas of expertise.

Through Executive Order 13272, the President has given the Office's comments special weight, making it difficult for an agency to dismiss the comments, even when they lack merit. The Order directs agencies to “[g]ive every appropriate consideration” to these comments. The Order further requires that agencies specifically respond to any of the Office's written comments in the preamble to the final rule.

Many reviewing courts take the Office's comments as powerful evidence that an agency has failed to comply with Reg-Flex, though these courts are otherwise not obliged to defer to the Office's interpretations of Reg-Flex's provisions.²¹ For example, a federal district court rejected a National Marine Fisheries Service (NMFS) rule setting commercial fishing quotas for Atlantic shark species after finding that the agency had failed to comply with various Reg-Flex procedures.²² (As noted above, agency compliance with Reg-Flex's provisions is judicially reviewable, and courts have the authority to reject rules if they determine that an agency has failed to adequately comply with one or more of these provisions.) The court's analysis in support of this finding relied heavily on the comments that the Office submitted during the rulemaking process.²³

With its regulatory comments, the Office of Advocacy seeks to use procedural hurdles of its own creation as a way to hamstring federal regulators working to fulfill their statutory obligations to regulate within their areas of expertise.

Reports to Congress and Congressional Testimony

Reg-Flex and Executive Order 13272 direct the Office of Advocacy to monitor and report to Congress annually on agency compliance with Reg-Flex's requirements. In these reports, the Office provides detailed critiques of each agency's purported failures to implement Reg-Flex in accordance with the Office's strict interpretation of the Act's provisions. For example, in its most recent report, the Office of Advocacy faulted the initial regulatory flexibility analysis that the Food and Drug Administration (FDA) performed for its proposed rules requiring dietary information labeling for chain restaurant menus and vending machines, arguing that the agency's analysis underestimated both the number of small businesses the rules would impact and the regulatory costs the rules would impose on those businesses.²⁴ The FDA developed these rules to implement two provisions in the Patient Protection and Affordable Care Act (PPACA)—the 2010 health care system reform law. One objective of the PPACA was to reduce overall health care costs in the United States, and these provisions were aimed at helping Americans to adopt healthier diets, which in turn would enable them to avoid potentially expensive medical problems in the future.

For agencies eager to avoid attracting unwanted attention from congressional members ideologically opposed to their statutory mission, the threat of negative reports from the Office can have a strong coercive on their activities. Many agencies take self-defeating preemptive actions, such as preparing overly elaborate or unrequired analyses or drafting inappropriately weak rules—actions that waste scarce agency resources and dilute public health and safety protections. The Office's negative report regarding the FDA's implementation of these two controversial provisions in the PPACA undoubtedly has supplied welcome ammunition to congressional Republicans who continue to wage a full-scale assault on the law.²⁵ The fear of attracting this kind of bad publicity likely pushes the FDA and other agencies engaged in implementing the health care reform law to be overly cautious with their Reg-Flex compliance, even when detrimental to the public interest.

In addition to the annual reports, Office of Advocacy officials also testify at congressional hearings to complain about what they claim are failures by agencies to properly fulfill Reg-Flex requirements. For example, in April of 2011, the Deputy Chief Counsel for the Office of Advocacy testified at a House Oversight Committee hearing dedicated to attacking the Environmental Protection Agency's (EPA) greenhouse gas regulations. In her testimony, the Deputy Chief Counsel argued that the EPA had failed to comply with several requirements, including criticizing the factual basis the agency supplied to justify certifying its first vehicle efficiency standard as not having a significant impact on small businesses.²⁶ As with the annual reports, the threat of negative publicity from Office of Advocacy testimony can push agencies to overcompensate in their Reg-Flex compliance efforts.

Small Business Regulatory Enforcement Fairness Act Panels

The 1996 Small Business Regulatory Enforcement Fairness Act (SBREFA) amended Reg-Flex to require the EPA and the Occupational Safety and Health Administration (OSHA) to give specially assembled small business panels a chance to oppose proposed rules before the rest of the public even has a chance to see them. Following the passage of the Dodd-Frank Wall Street reform bill, congressional Republicans quickly enacted a bill that subjected the Consumer Financial Protection Bureau (CFPB), an agency created by the Dodd-Frank statute to help implement many of its reform provisions, to the SBREFA panel requirement as well.

The three agencies must undertake the SBREFA panel process for all planned rules that are predicted to have a significant impact on small businesses—the same trigger for the various other Reg-Flex analytical requirements. However, as with the Reg-Flex requirements, an agency need not undertake the SBREFA panel process if it formally certifies that its planned rule will not have a significant impact on small businesses. As noted above, an agency's decision to certify is subject to judicial review. Given that the Office has set such a high bar for justifying certification, the threat of judicial review can strongly discourage agencies from certifying a rule, even when this step would be appropriate.

In some cases, the Office has pressured agencies into undertaking the functional equivalent of a SBREFA panel, even though their planned rule plainly would not have a significant impact on small businesses. For instance, OSHA buckled under Office of Advocacy pressure and conducted a pseudo-SBREFA panel process for its then-planned “300 log MSD column” rule, which would have added a column to the required injury and illness recording form so that employers can keep track of their workers' employment-related musculoskeletal injuries.²⁷ OSHA went through this process even though the rule's projected costs would amount to a mere \$4.00 per employer in its first year and \$0.67 every year thereafter.²⁸

Much like the Office of Information and Regulatory Affairs' (OIRA) centralized review process, the SBREFA panel process focuses on weakening rules because the panels are dominated by interests opposed to strong regulatory requirements. Beside the rulemaking agency representatives, each SBREFA panel must include the Chief Counsel of the Office of Advocacy (*i.e.*, the individual who heads the Office), OIRA officials, and small business “representatives.” The Office works with these other outside participants to criticize an agency's rule with the goal of weakening it. At the end of the process, the panel prepares a report compiling all of the criticisms of the draft rule, which is then included in the official rulemaking record.

Reg-Flex requires that a rulemaking agency respond to the criticisms included in the panel's report, and a failure to do so can provide a reviewing court with a basis to reject the underlying rule. This process contributes to the ossification of the rulemaking process, mentioned earlier, and it can create a potent incentive for an agency to weaken the rule rather than mount a time-consuming defense of a stronger rule, which would require producing an elaborate analysis to respond to all the criticisms raised in the SBREFA panel report.

SBREFA panel-related delays can add up to a year to the rulemaking process if not longer. These delays come on top of the several months of delay that the other Reg-Flex requirements introduce into the rulemaking process. By law, the formal panel period is supposed to last around two months. But, eager to avoid extensive criticism during the SBREFA panel process, agencies frequently spend months revising their planned rules and any underlying economic analyses prior to convening the formal panel. For example, preparations for the SBREFA panel process appear to have delayed OSHA's work on the Injury and Illness Prevention Program (I2P2) rule by more than a year. In June of 2011, the agency had planned to convene a SBREFA panel for its rule by the end of the month. Eventually, OSHA pushed this date back to January of 2012 and then March of 2012.²⁹ According to Office of Advocacy records, OSHA still has not convened this panel,³⁰ bringing the total delay to 16 months and counting.

Centralized Regulatory Review at the Office of Information and Regulatory Affairs

Executive Order 13272 directs the Office of Advocacy to work closely with OIRA—another institution that serves to weaken regulation, as previous CPR reports have discussed—when intervening in agency rules. The Office frequently takes advantage of the Order's authorization to meet with OIRA to raise concerns about proposed agency rules. In fact, a 2012 report from CPR on OIRA meetings with outside advocates found that the Office participated in 122 of the 1,080 reported meetings (or more than 11 percent) that OIRA held over the 10-year period covered in the CPR study.³¹ The Office was by far the most frequent non-White House participant in OIRA meetings and attended more than three times the number of meetings attended by the most active industry participant, the American Chemistry Council (39 meetings).³²

This Executive Order builds off of a March 2002 Memorandum of Understanding, which establishes a formal partnership between the Office and OIRA to strictly enforce Reg-Flex's procedural requirements to "achieve a reduction" in regulatory burdens for small businesses.³³ The Memorandum directs the Office to seek OIRA's assistance in pushing agencies to take corrective action—including more detailed analyses, evaluating additional less costly alternatives, or even adopting a less costly alternative—when the Office determines that they have failed to satisfy its strict interpretation of Reg-Flex's requirements. Given that OIRA has the power to reject the rules it reviews, agencies are unlikely to ignore its demands for Reg-Flex-related corrective actions. As such, OIRA provides powerful reinforcement in the

unlikely event that the Office is unable to extract these corrective actions on its own. The Memorandum also deputizes OIRA to aid in monitoring agency compliance with Reg-Flex requirements as part of its normal regulatory review activities. Whenever OIRA determines that an agency has likely failed to satisfy the Office of Advocacy's strict interpretation of any Reg-Flex requirements, it must then work with the Office to push the offending agency to take corrective action.

Participation in Lawsuits Challenging Rules

Reg-Flex authorizes the Office of Advocacy to join in lawsuits brought by industry to challenge agency rules, enabling it to push the reviewing court to reject rules for failing to satisfy applicable Reg-Flex procedural requirements.³⁴ These lawsuits create the highly unusual scenario in which one office within the Executive Branch is actively engaged in a legally binding effort to undermine an action taken by another office within the Executive Branch.

The Office of Advocacy has already participated in several lawsuits in which the reviewing court returned the rule to the agency to bring the underlying analyses into compliance with one or more of Reg-Flex's provisions.³⁵ In response to these adverse rulings, agencies must undertake new and more detailed analyses, delaying the implementation of their rules and using up scarce agency resources.

The Office of Advocacy Bolsters Political Attacks on Regulations

In addition to the previous rulemaking-related activities, the Office of Advocacy has taken actions to buttress the attacks that industry and its allies in Congress have waged against the U.S. regulatory system as a whole.

Sponsoring Anti-Regulatory Research

Over the years, the Office of Advocacy has doled out taxpayer money to sponsor several research projects brazenly designed to advance the cause of further weakening the U.S. regulatory system. Non-governmental researchers carry out these projects under contracts awarded by the Office with little in the way of oversight or peer review.

The most egregious Office of Advocacy-sponsored research project was the 2010 study by economists Nicole Crain and Mark Crain, which purported to find that the annual cost of federal regulations in 2008 was about \$1.75 trillion.³⁶ As a CPR white paper first found,³⁷ and a separate evaluation by the non-partisan Congressional Research Service later confirmed,³⁸ Crain and Crain were only able to achieve this outlandish cost figure by employing faulty models, biased assumptions, and erroneous data. The report's myriad methodological defects all have a distinctly anti-regulatory bias, each leading inevitably to overstated cost calculations. Beyond these methodological defects, the Crain and Crain

The Crain and Crain report's biased frame and risibly overstated findings are tailor-made to support the false conservative narrative that eliminating regulatory safeguards will translate into economic growth and job creation.

report is noteworthy for what it omits: any attempt to account for regulatory benefits. The report's exclusive focus on regulatory costs—absurdly high cost estimates, in fact—while ignoring benefits provides an inherently distorted picture of the regulatory system that is skewed against all safeguards, no matter how critical they are for protecting public health and safety

The Office's flawed management of the Crain and Crain report contract was equally disturbing. The contract failed to require the report's authors to disclose all of the report's underlying data, models, assumptions, and calculations, making it impossible to independently verify the integrity of the report's findings. In addition, the Office of Advocacy's peer review process for the report was woefully inadequate: One reviewer raised significant concerns with the report's underlying methodology which were never addressed while the other's review consisted of only the following 11-word comment: "I looked it over and it's terrific, nothing to add. Congrats[.]"³⁹

Despite the Crain and Crain report's dubious provenance, regulatory opponents routinely cite its findings when attacking the U.S. regulatory system or pushing for legislation that would undermine agencies' ability to carry out their mission of protecting public health and safety. The report's biased frame and risibly overstated findings are tailor-made to support the false conservative narrative that eliminating regulatory safeguards will translate into economic growth and job creation. For example, the House Committee on Oversight and Government Reform, which has held dozens of anti-regulatory hearings since the committee returned to Republican control, cited the Crain and Crain report and its findings extensively in a February 2011 study, which attempts to make the specious argument that pending regulations are stifling job creation.⁴⁰ Similarly, Sen. Rand Paul (R-KY) invoked the Crain and Crain report when arguing for the Regulations from the Executive in Need of Scrutiny Act, a bill he sponsored that would effectively shut the regulatory system down by blocking all major regulations unless a majority in both Houses of Congress voted within 90 days to approve them.⁴¹

Participating in Anti-Regulatory Congressional Hearings

Office of Advocacy officials have long served as loyal allies in Congress's anti-regulatory hearings, consistently delivering testimony that reinforces the political case for weakening regulations and further hobbling the regulatory system. As noted, these officials frequently testify to criticize agency compliance with Reg-Flex procedural requirements, but the same testimony is also broadly critical of the regulatory system as a whole, echoing the talking points typically found in the testimony of industry representatives or in the opening statements of anti-regulatory Members of Congress. For example, the head of the Office of Advocacy during the George W. Bush Administration testified at a 2005 House Committee on Government Reform hearing focused on attacking various EPA regulations. His testimony helped advance the transparently political agenda of the hearing by strongly

criticizing EPA regulations as unduly burdensome—while conspicuously ignoring their benefits—and by advocating for rolling them back.⁴²

Office of Advocacy officials have also testified at hearings to support passage of several pending anti-regulatory bills. In his testimony at a 2006 hearing, for example, the then head of the Office of Advocacy asserted that the Office “supports the goals of” a proposed bill that would amend Reg-Flex’s procedural and analytical requirements to make them more burdensome for agencies to complete.⁴³

The Office of Advocacy Engages in Anti-Regulatory Activities Unrelated to Helping Small Businesses

The focal point of the Office of Advocacy’s institutional mission has evolved from seeking preferential regulatory treatment for small businesses to opposing all regulations. Aided and abetted by industry groups and their political allies, the Office pursues this mission by working to block regulations opposed by large corporate interests and attempting to interfere in the scientific underpinning of agency regulations.

The Office of Advocacy’s Small Business Size Standards Are Overly Broad

For the purposes of implementing Reg-Flex, the Office of Advocacy employs a definition of “small business” that is a far cry from the common understanding of that term’s meaning. Instead of being based on a single number (for example, any firm with 20 or fewer employees), the definition is actually a complex scheme that sets varying size standards for each industrial sector within the economy.⁴⁴ Critically, these standards are based on the relative size of different firms within each given industry, and, as a result, the “small businesses” in industries that comprise mostly large-sized firms can be huge. In some sectors, the definition of small business includes firms that employ more than 1,000 workers. For example, the Office considers a petroleum refinery to be a “small business” as long as it employs fewer than 1,500 workers. Similarly, chemical plants that employ fewer than 1,000 workers are a “small business” in the Office’s eyes.

Because of these overly broad small business size standards, the Office is able to push for preferential regulatory treatment for relatively large firms, firms far bigger than the term “small business” suggests. For example, in August of 2011, the Office submitted comments on the EPA’s proposed rule to reduce hazardous air pollution for fossil fuel-based power plants criticizing the agency’s efforts to comply with several Reg-Flex procedural requirements, including the SBREFA panel process. Among other things, the Office argued that the EPA had not adequately considered potentially less burdensome regulatory alternatives for “small business” power plants in its initial regulatory flexibility analysis.⁴⁵

Trade Association Lobbyists Subvert the Office of Advocacy's Small Business Outreach Efforts

In addition, large corporate interests have supplied representatives for SBREFA panels. For example, a lobbyist from the American Farm Bureau—a politically powerful trade group that typically works to advance the interests of industrial-scale farms—recently served as a “small business” representative on the SBREFA panel for the EPA’s 2010 update to its renewable fuel standard program.⁴⁶ By permitting organizations such as the American Farm Bureau to participate in SBREFA panels, the Office of Advocacy has stretched the concept of small business representative beyond all recognition. The American Farm Bureau’s membership includes several industrial-scale agriculture operations that would not meet even the Office’s generous definition of small business. And, the interests of these industrial-scale operations often dictate the organization’s political agenda, even when those interests are antithetical to those of genuinely small farms.⁴⁷ For example, the catastrophic droughts that affected much of the United States this past summer provided a glimpse of the harsh impacts that climate change will have on America’s small farmers. Nevertheless, the American Farm Bureau worked tirelessly to help defeat the 2009 climate change bill that would have curbed greenhouse gas emissions through a comprehensive cap-and-trade system.⁴⁸

In some cases, the small business representatives who participate in SBREFA panels come at the suggestion of lobbyists for large trade associations, such as the National Association of Home Builders, whose members include large corporations that do not meet the Office’s small business size standards.⁴⁹ This practice raises the concern that lobbyists operating to advance the interests of large corporations improperly use small businesses representatives as surrogates to attack rules they oppose, enabling these corporate interests to avoid incurring any potential political costs for opposing safeguards that are otherwise popular with the general public.

The participation of large corporate interests defeats the objective of SBREFA panels—namely, to gather the perspective of small business on pending regulations that would otherwise not be available in the absence of these panels. These panels offer small businesses a critical opportunity to offer their unique concerns regarding a planned rule—an opportunity that is all the more important because large corporate interests have come to dominate every other step in the rulemaking process, including notice-and-comment and OIRA’s centralized review.⁵⁰ By permitting lobbyists for trade associations and other large corporate groups take part in SBREFA panels, the Office risks allowing the voice of truly small businesses to be drowned out at this stage of the rulemaking process as well.

The Office of Advocacy Interferes with Agency Scientific Determinations

The Office of Advocacy frequently operates outside its legal authority and scientific expertise by weighing in on agencies' purely scientific determinations. For example, in October of 2011, the Office submitted regulatory comments criticizing the EPA's Integrated Risk Information System (IRIS) program.⁵¹ A frequent target of industry attacks, IRIS is a centralized database that gathers human health risk assessments for various environmental contaminants, which the EPA can use to set regulatory standards.⁵² Specifically, the Office criticized the data and models that the EPA had used in its IRIS risk assessment for the harmful chemical hexavalent chromium, and it urged the agency to revise its assessment, a process that would waste scarce resources and delay the final assessment by several months. The Office also recommended that the EPA reform the entire IRIS program, arguing that it lacked "objectivity" and adequate "scientific rigor."⁵³ Such recommendations are far beyond the expertise of the Office and have unique interests of small business. They do, however, bear a striking resemblance to the arguments that industry lobbyists make about IRIS assessments.

The Office intervenes in these kinds of scientific determinations despite the fact that they do not independently impose any regulatory requirements, and thus have no real impact on small businesses. In June of 2009, the Office intervened in the EPA's proposed greenhouse gas endangerment finding, which did nothing more than certify the federal government's official finding that greenhouse gases "endanger public health and welfare" by contributing to global climate change. Nevertheless, the Office argued in its comments that the EPA should abandon the effort completely.⁵⁴ The comments added nothing constructive to the EPA's endangerment finding efforts, failing to address any of the scientific questions at issue. Instead, the Office devoted its comments to arguing that the Clean Air Act's regulatory programs were not well suited to regulating greenhouse gases and might disproportionately harm small businesses—all hypothetical and unrelated matters that would be better addressed in comments on any actual Clean Air Act rules aimed at regulating greenhouse gases. Again, such arguments were not grounded in any expertise the Office might have, or in any unique small business interest, but they did comport with big-business criticisms of the EPA's finding.

The Office's decision to move into regulatory science is far removed from its statutory mission to argue for preferential regulatory treatment for small business. This interest in attacking regulatory science can only be understood as the Office assuming the role of arguing against more stringent regulation in all forums that may relate to regulatory protections, even ones where the agency has no expertise.

The Office of Advocacy Pushes for Weaker Regulatory Requirements for Large Businesses

The Office of Advocacy commonly seeks to weaken the requirements of proposed rules for all affected entities, rather than seeking rule changes that are tailored to reducing adverse impacts on small firms only. For example, in its comments on the EPA's proposed rule to limit hazardous air pollutants from oil- and coal-fueled power plants, the Office criticized the agency for not considering as a regulatory alternative a rule that would merely limit plants' mercury emissions. Remarkably, the Office recommended that this drastically scaled-back rule apply to all power plants, regardless of their size.⁵⁵ Such an alternative would provide no unique preferential regulatory treatment for "small" power plants. It would also leave unregulated all of the other toxic air pollutants that power plants release—including arsenic, lead, and formaldehyde—in clear violation of the Clean Air Act.⁵⁶ While this alternative would certainly reduce regulatory costs for small power plants, its primary effect would be to provide a huge regulatory subsidy to the large power plants that dominate the electricity generating industry. Here again, the Office offered commentary that could just have easily been written by big-business or special interest lobbyists, rather than focusing on an small-business interest in the proposed regulations.

The Office also frequently joins representatives of the largest corporations and trade groups in meetings with OIRA officials to push for rule changes that would benefit large businesses. For example, in July of 2010 an Office of Advocacy official attended a meeting with the U.S. Chamber of Commerce, the National Association of Manufacturers, and the National Association of Home Builders to try to push OIRA to block OSHA's 300 log MSD column rule.⁵⁷ In October of 2006 an Office of Advocacy official attended a meeting with ExxonMobil, the American Chemistry Council, and Bayer Corporation to push for changes to the EPA's pending rule to revise its definition of solid waste under the Resource Conservation and Recovery Act.⁵⁸

In many cases, weaker regulatory requirements for large firms can actually have the perverse effect of harming small businesses—rather than helping them—and thus directly conflicts with the Office's mission. Regulatory subsidies for large firms can make it even more difficult for small businesses to remain competitive, inhibiting people's ability to start these firms and sustain them over the long run.

Helping Small Businesses While Promoting Public Health and Safety: It's Time to Reform the Office of Advocacy

A New Mission: Promoting Win-Win Regulatory Solutions

The role of the Office of Advocacy should be to develop “win-win” regulatory solutions that help small businesses meet the high regulatory standards needed to protect public health and safety, instead of lowering those standards for them. In other words, the Office should seek to protect small businesses “competitiveness” without undermining public health and safety. In many cases, the costs of complying with regulations can put small businesses at a competitive disadvantage with larger businesses, which are better equipped to pass many of these costs along to their consumers. Larger businesses are also able to afford attorneys, engineers, accountants, and other compliance consultants, who can help them devise cheaper ways to fulfill regulatory requirements.

Providing small businesses with preferential regulatory treatment helps them remain competitive with larger firms, but it comes at the expense of public health and safety. In effect, preferential regulatory treatment subsidizes small businesses by passing on to the public the socially harmful impacts of their activities, such as air and water pollution, hazardous working conditions, and unreasonably dangerous consumer products. In contrast, the Office’s current approach of working to reduce regulatory burdens across the board for all firms reduces regulatory impacts on small businesses, but does nothing to promote small business competitiveness. This approach also likely undermines regulatory safeguards more severely than would an approach that merely focuses on providing preferential regulatory treatment to small businesses alone.

The role of the Office of Advocacy should be to develop “win-win” regulatory solutions that help small businesses meet the high regulatory standards needed to protect public health and safety, instead of lowering those standards for them.

Fortunately, if the public agrees that small businesses need to be subsidized, policymakers have an alternative strategy: They can promote small business competitiveness by affirmatively helping them to meet effective public health and safety standards. The Office should use its role in the regulatory process to explore and promote creative solutions for achieving this goal. Such creative solutions could include:

- **Providing monetary assistance to truly small businesses so that they can meet higher regulatory standards.** Monetary assistance could include direct subsidies to cover part or all of the costs of equipment upgrades required for regulatory compliance. Alternatively, the Office could work to obtain subsidized loans to help small businesses defray regulatory compliance costs.
- **Expanding regulatory compliance assistance programs.** SBREFA established several compliance assistance programs, including requiring agencies to produce “compliance guides” for each of their rules that have a significant impact on small businesses.⁵⁹ These compliance guides describe the rule and explain what actions small businesses need to take to comply. Congress can help improve the effectiveness of compliance guides by providing agencies with full funding to produce and distribute them. In addition, Congress can establish local offices throughout the country staffed with compliance consultants that can help small businesses understand their obligations under different regulations. To be effective, Congress must ensure that the network of compliance consultant offices is fully funded.
- **Partnering small businesses to promote beneficial synergies on regulatory compliance.** The Office could explore different ways of partnering small businesses that will help them meet regulatory obligations in mutually beneficial ways. For example, the Office could help establish a cooperative of small businesses within a given location, which could share the cost of compliance assistance services, such as those provided by accountants or engineering consultants. Alternatively, the Office could establish partnerships that build off the Small Business Administration’s (SBA) preferential government procurement and contracting policies for helping small businesses. For example, if a small business requires special services, such as accounting, to comply with a regulation, then the Office could explore ways to partner that business with another small firm that provides those special services. In this way, the Office can assure that one small business’s compliance with regulations help to create a profitable market for another small business.

To achieve these reforms, Congress will need to:

- Amend the primary statutory authorities under which the Office operates (P. Law. 94-305 and Reg-Flex) to replace their focus on reducing small businesses' regulatory costs with a new focus on promoting win-win regulatory solutions that ensure small business competitiveness without undermining public health and safety;
- Expand the Office's legal authority as necessary to enable it to explore and promote win-win regulatory alternatives that help small businesses meet high regulatory standards while maintaining competitiveness;
- Provide the SBA with additional legal authorities to establish and implement new win-win regulatory subsidy programs that affirmatively assist small businesses remain competitive while meeting high regulatory standards;
- Establish and fully fund a network of small business regulatory compliance assistance offices; and
- Increase agency budgets so that they are able to carry out Reg-Flex analyses and compliance assistance guides without displacing critical resources needed to advance their statutory mission of protecting public health, safety, and the environment.

In addition, the Office will need to:

- Significantly overhaul its Reg-Flex compliance guide for agencies, so that it helps them to work toward creative win-win regulatory solutions that enable small businesses to remain competitive while meeting high regulatory standards and
- Work with small businesses to develop and promote win-win regulatory solutions in comments on proposed regulations, SBREFA panels, lawsuits, and sponsored research. SBREFA panels in particular will be critical for gathering the unique views of small businesses for identifying how pending regulations might inhibit their ability to compete and for developing innovative solutions for helping these firms to meet high regulatory standards while remaining competitive.

Finally, the President should revoke Executive Order 13272. Given its strong anti-regulatory culture, OIRA is unlikely to provide the Office with much assistance in identifying ways to help small businesses meet regulatory standards needed to protect public health, safety, and the environment. Instead, OIRA will likely continue to push the Office to weaken agency rules, even where potential win-win regulatory solutions are appropriate and available.

The Office of Advocacy should employ new small business size standards, applicable to all industrial sectors, that define a “small business” as only those firms with 20 or fewer employees.

Restored Focus: Helping Truly Small Businesses Only

The Office of Advocacy has become a potent anti-regulatory force, working to block, delay, and dilute all regulations, even those that do not have a clear impact on small businesses. Whatever the policy goals are that might justify shielding small businesses from fulfilling their regulatory obligations, they certainly do not extend to larger businesses. Accordingly, the Office should restrict its actions to helping truly small businesses only.

To accomplish this goal, Congress will need to do the following:

- **Enact legislation that revises the SBA’s small business size standards.** The new size standards should define a small business as any firm with 20 or fewer employees—regardless of which industry the firm is in—rather than basing the definition on the relative size of different firms within each given industry, as the current size standards do. This revision would not only better align the regulatory definition for small business with the popular understanding of that term, it would better effectuate the policy goals that the government seeks to achieve by providing truly small businesses with preferential regulatory treatment. In addition, the small size standards should exclude certain industrial categories that pose an inherently high risk to public health and safety, such as the dry cleaning industry. Businesses in these exempted industrial categories should not qualify for win-win regulatory subsidy programs, even if they have 20 or fewer employees, because their activities are too harmful to public health and safety.
- **Enact legislation that prohibits large corporate interests from participating in or using small business surrogates to participate in SBREFA panels.** To participate in SBREFA panels, a business must first qualify as a small business under the revised small business size standard. To make this mandate enforceable, the law should further require all businesses that participate in SBREFA panels to certify that they both meet the revised small business standard and are not acting as agents for any business or trade group that does not meet the revised small business standard. Congress should declare that making a false statement in this certification is a crime under 18 U.S.C. §1001. Furthermore, Congress should bar for at least three years any business that makes a false statement in the certification from participating in any future SBREFA panels and from qualifying for any win-win regulatory subsidy programs established and implemented either by the Office or by the SBA.
- **Conduct more frequent and thorough oversight.** The House and Senate committees with primary jurisdiction over the Office—presently, the House Small Business Committee and the Senate Small Business and Entrepreneurship Committee—should endeavor to conduct at least one oversight hearing for the Office every year. One of the goals of these oversight committee hearings should be to ensure that the Office is limiting its activities to helping only businesses that meet the revised small business size standard.

Again, the President can reinforce these reforms by revoking Executive Order 13272. Because OIRA has such a strong anti-regulatory culture, any continued collaboration with OIRA will likely encourage the Office to continue working to block, delay, and dilute regulations for businesses not meeting the revised small business size standard.

Endnotes

- ¹ We borrow term the “preferential regulatory treatment” with slight modification from a 1998 law review article by administrative law professor Richard Pierce. See Richard J. Pierce Jr., *Small is Not Beautiful: The Case Against Special Regulatory Treatment of Small Firms*, 50 ADMIN. L. REV. 537 (1998). The term includes regulatory exemptions; less stringent or delayed regulatory requirements; and relaxed enforcement for regulatory violations, such as waived or reduced penalties. See *id.* at 542-43.

About the Authors

Sidney Shapiro holds the University Distinguished Chair in Law at the Wake Forest University School of Law and is a member of the Board of Directors of the Center for Progressive Reform. Professor Shapiro has taught and written in the areas of administrative law, regulatory law and policy, environmental policy, and occupational safety and health law for 25 years. Professor Shapiro has been an active participant in efforts to improve health, safety, and environmental quality in the United States. He has testified before congressional committees on administrative law and occupational safety and health issues.

James Goodwin works with CPR's "Regulatory Policy" and "Clean Science" issue groups. Mr. Goodwin joined CPR in May of 2008. Prior to joining CPR, Mr. Goodwin worked as a legal intern for the Environmental Law Institute and EcoLogix Group, Inc. His articles on human rights and environmental law and policy have appeared in the *Michigan Journal of Public Affairs* and the *New England Law Review*.
